

Motorized Rolling Garage Door Screen

Model 725 Interior Mounted Screen

The model 725 is a unique motorized screen door system that installs on the inside of the garage. The 725 series garage door screens were designed to be installed by a professional garage door dealer.

Caution: Get used to hearing this phrase quite often:

WOW !!!!!!!!!!!

That is the coolest thing I have ever seen!

Mounting bracket for door operator and spring bearing plate.

Screen track has holes for wood mounting lags. The garage door track tech screws into the steel tube of the screen track.

Mounting plates for the garage door; drums, springs and bearing plates attach to the garage door track.

Garage door jamb weather-strip seals the screen door. Clip on track weather-strip supplied with the screen, seals the garage door and brush seal across the top of the door keeps out drafts.

Built in motor lets you push a button to have an instant screen room.

The frame is constructed of welded steel and powder coated for years of durable use.

The screen is heavy duty vinyl coated polyester mesh.

Horizontal windbars are built into the screen to make sure it seals tight and will not blow out of your door opening.

Recommended 18" head-room. Installation to be performed by a qualified professional garage door dealer. The existing garage door will have to be modified for installation of the model 725 garage door screen.

Quick wire switch supplied or optional remote control operation.
